

Martin Weatherall, candidate for Mayor of the Blandford-Blenheim Township, says he is making **severe electrical pollution of our environment** the main subject of his election platform. The issue is not an easy one, so he is telling his electorate: *"You will need to conduct some basic research to understand the dangers that we are all facing, but the incentive for doing this is the health and safety of your family."*

Weatherall's election brochure is doing a good job of making the issue real to his constituents, and there are links on where to go for further information.

"Electrical pollution is likely to significantly eclipse the known harm from tobacco use, but it will not affect "just smokers". Human and animal life is being exposed to the same danger, through varying levels of radiation. Even Inuit natives of the Arctic have reported unpleasant symptoms when their community had a WiFi system installed recently. The very young and the very old are the most vulnerable."

- - - ***"I have no doubt in my mind that, at the present time, the greatest polluting element in the earth's environment is the proliferation of electromagnetic fields."*** (from an interview with Linda Moulton Howe, May 2000) stated by Robert Becker, M.D., Orthopedic Surgeon and pioneering researcher in the field of biological electricity and regeneration. Twice nominated for the Nobel Prize. Author of [The Body Electric](#) (William Morrow & Co 1987) and [Cross Currents](#) (Tarcher/Putnam, 1990).

A former Toronto police officer, Weatherall is no stranger to investigation.

*"As a retired police officer," he says, "I do not make these accusations lightly. I have spent the last two years investigating the cause of my cancer and other illnesses. I have collected a large amount of research information and have been in touch with experts and victims from all around the world. There is clear evidence that electromagnetic radiation is causing widespread illness, including cancer, throughout the world. Most of my career with Toronto police was spent investigating the most serious crimes, including dozens of homicides. The discoveries that I have made since my retirement make all that previous criminal investigation seem minor in comparison. **There is significant evidence that the population of Canada is being seriously harmed by exposure to dangerous levels of EMR.**"*

Why is Martin Weatherall picking this issue for a political campaign? For one, he himself is suffering from electro hypersensitivity - listing the [Swedish Association for the ElectroSensitive](#) as a source for more information. But then he also says:

"I spent most of my working life trying to help others and trying to make our society safer, but since my retirement I have discovered significant dangers to the lives of a great many Canadians. I cannot ignore what I have discovered. I have tried to get action from several government ministries, Hydro One, Members of Parliament, and Members of Provincial Parliament without success. My campaign will bring these serious dangers to the attention of the public. With your support and election as mayor, I will be in a much better position to push for positive changes that will make us all safer."

Even if you do not live in Ontario, Martin Weatherall's election brochure makes interesting reading. I am providing [a copy of the brochure](#) here.
